PARATUS

Paratus Namibia

Data Center

Our facility is hosted in a secure campus environment with two independent data centers. Each data center offers customers multitenant colocation with the option of a caged environment for additional security.

Location

- Brakwater, Windhoek, Namibia
- Geo-coordinates: -22.414, 17.068
- Height 1530 asl (Above Sea Level)
- Paratus's Largest and most modern Data Center facility
- Operational September 2022

Connectivity

Armada is equipped with 3 diverse routes for virtually no interruptions to connectivity.

Environmental Control

Temperature and humidity monitoring and industry-leading DX cooling ensures N+1 cooling across our DCs. Constant positive pressure and a 3-stage air filtration system with Hepa filters that filter particles down to 0.3 microns, keep the facility dust free. VESDA and optical smoke detection are backed by environmentally friendly NOVEC suppression gas, all of which are closely monitored by DCIM.

Facilities

Business continuity rooms with video conferencing and a fully equipped boardroom. .

Power

The campus boasts 2MVA power capacity, with fully independent generators for power backup with diverse routes, supplying a true A and B feed throughout, down to equipment level. Each DC has 2 independent and inter-resilient 600 kVA UPSs to ensure complete autonomy down to the intelligent PDUs (A&B) for each customer cabinet. Dedicated generators deliver up to 2MVA (2,000 kVA) of back-up power. Green, solar power during daylight hours for further resilience.

Security Systems

- 24-hour security.
- Access control.
- CCTV monitoring and in-row surveillance for customers.
