

## About Paratus Group

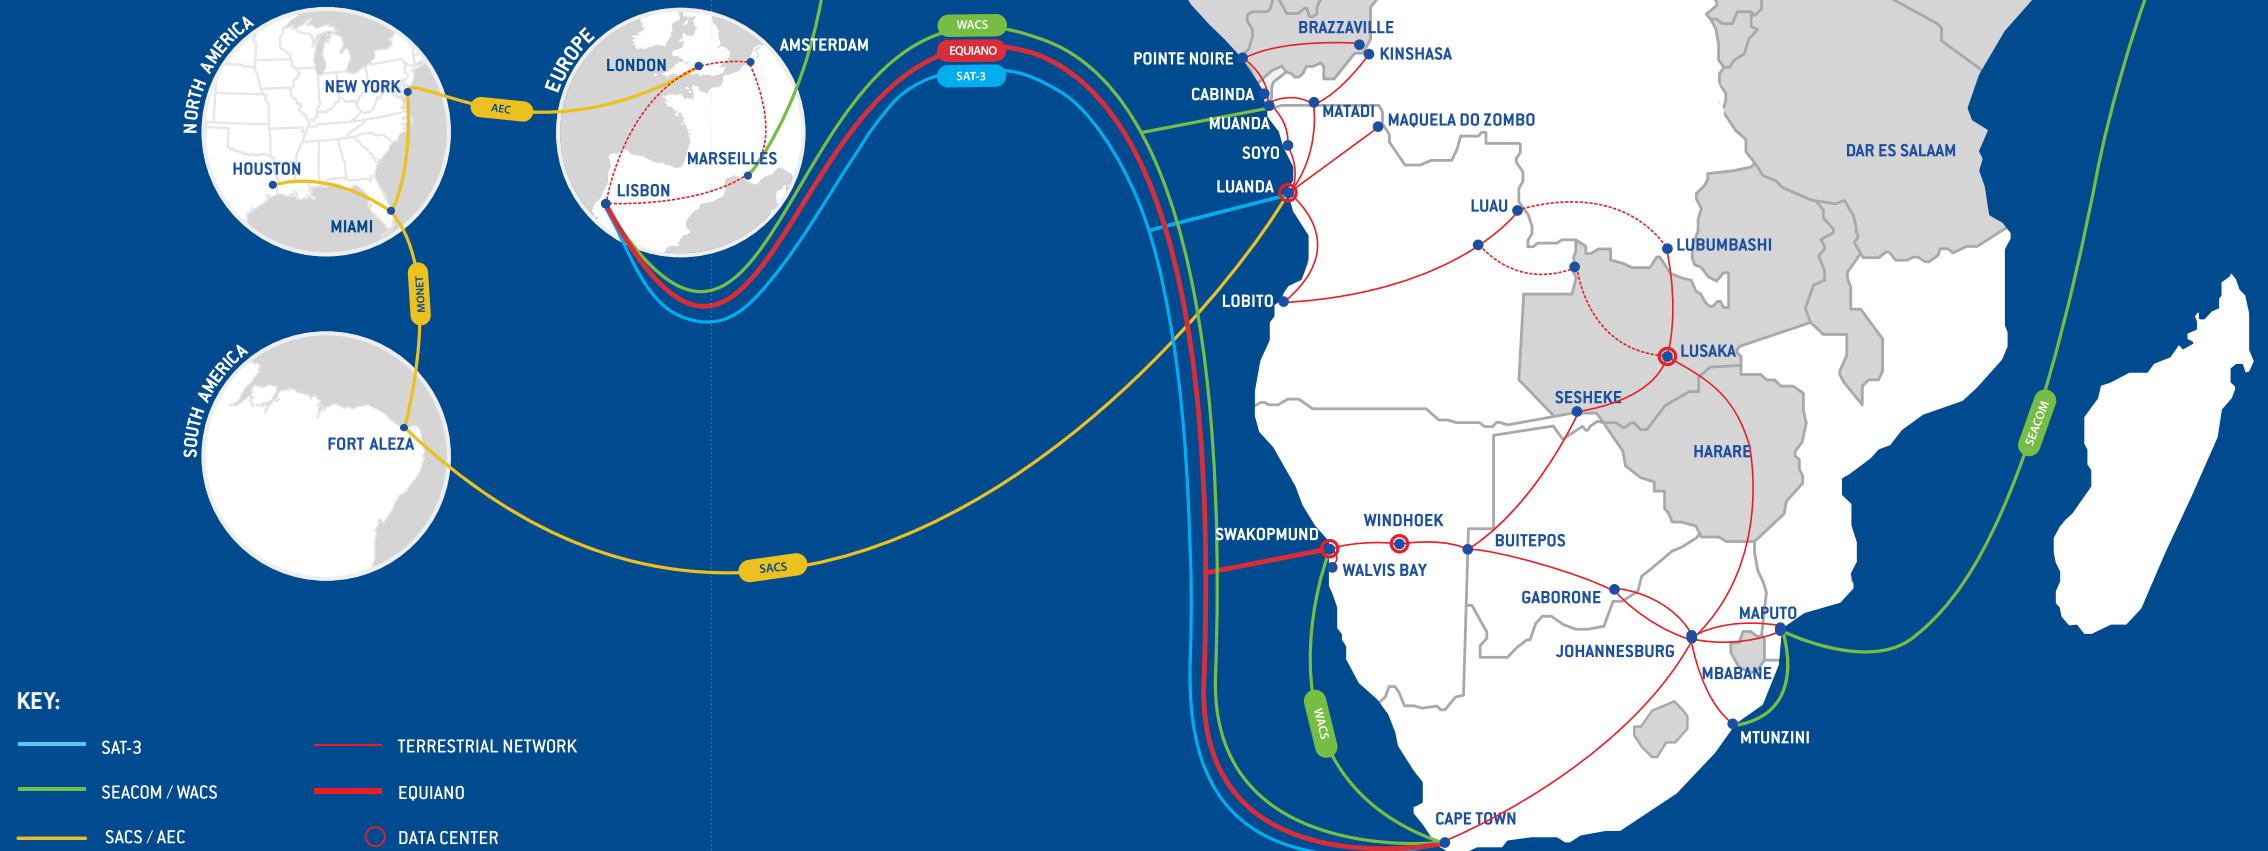

### Paratus is Africa's Quality Network providing connectivity services for Africa, by Africans.

As a company born and bred in Africa, we understand the opportunities that Africa offers businesses and individuals. We deliver world-class technology through passionate and committed employees, who ensure that each customer experience is a valuable one.

Through our own framework, the Paratus Group provides ICT network solutions, fiber and satellite connectivity that cross-links Africa and the world. We are a major telco player with an impressive and ever-expanding footprint in Africa. We help businesses unlock their potential and provide them with the freedom to connect all the time, and anywhere.

Our pioneering work, our innovation and our investment are the main drivers in our aim to transform Africa through exceptional digital infrastructure and service.

# Africa's Quality Network

## Connectivity - Fiber and Wireless

Fiber

### Your connection to high-speed success

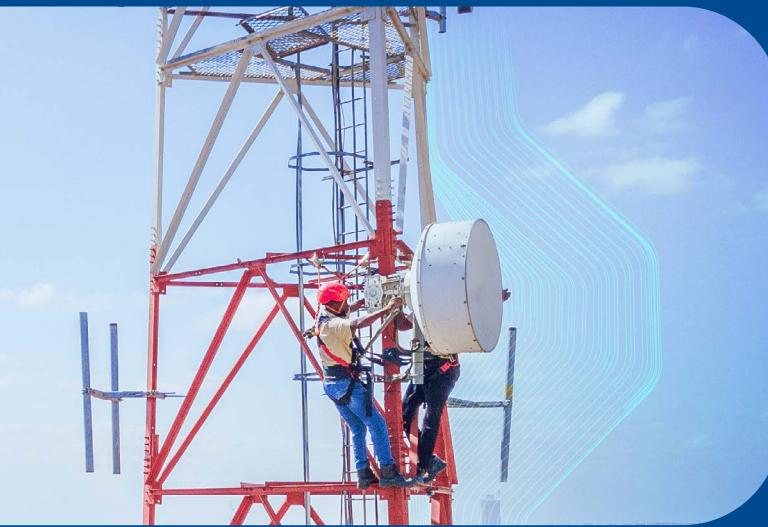

Isn't it time your business enjoyed bullet-fast connectivity? Fiber, with high speed access and reliable connectivity, will give your business the heavy-hitting connectivity it needs to stay ahead in a competitive world.

Wireless

### Give your business a performance advantage.

Paratus offers fixed wireless solutions to give your business constant, reliable and fast Internet connectivity. Our experience and commitment to service excellence means high-speed downloads and connectivity you can count on. All with 24/7 support.

## MPLS/SD WAN

Keep your business traffic flowing with a reliable connection.

Establish secure, private, reliable VPN connectivity via Paratus' global MPLS network rooted in Africa. With Service Level Agreements (SLA) and our 24/7 Network Operations Centre (NOC) support, we ensure the best possible WAN performance and uptime for your business.

MPLS benefits include:

- Cost-effective
- Fully managed end-to-end service
- Provides SLAs
- 24/7 Network NOC and in-country support

SD WAN benefits (VeloCloud) include:

- Centralized management across branch networks
- Improved network security
- Increased application performance
- Advanced application visibility and control
- Reduces cost & increases business agility

## Stabilised Microwave Solutions

Ceragon

Ceragon's PointLink Access is a marine-grade Point to Point (PtP) and Point to Multi Point (PtMP) connectivity system that provides a secured, high capacity, low latency solution, enabling your offshore and Maritime operations to meet your business objectives. It integrates highly reliable microwave equipment with customized antenna stabilization technologies as well as resilient paths and topologies to provide you high reliability and most importantly, peace of mind.

The modern ultra-light design of the PointLink Access enables effective communication to smaller vessels and mobile users, where the communication is based on a number of technologies such as; LTE/4G in licensed frequency bands, Wi-Fi in unlicensed bands and Microwave links in both licensed and unlicensed bands. The compact light-weight design saves valuable deck-space, and with a total weight of approx. 25 kg (50 lb) including data modem, antenna and protective radome, the system is easy to install on the vessel.

## Satellite

Paratus' range of satellite services mark a significant stride in global connectivity. Through Geostationary (GEO), Medium Earth Orbit (MEO), and Low Earth Orbit (LEO) constellations, we are forging a new standard for seamless communication.

Our GEO network provides reliable connectivity, ensuring uninterrupted coverage for industries reliant on steadfast connections. Further down, the MEO constellation strikes a balance, delivering high-speed data transfer with calculated responsiveness. Even nearer to Earth's surface, our LEO network embodies speed and agility, drastically reducing latency for business critical applications.

Satellite technology is important to the Oil & Gas sector and plays a critical role in supporting the industry's operations in remote locations. From exchanging critical data with onshore experts to boosting operational efficiency, ensuring environmental safety through gas detection, providing e-health and e-training services, and attracting and retaining top talent, satellite communications provide a reliable and efficient means of communication and connectivity for offshore workers. As the industry continues to move towards digitalization and the era of digital oilfields and rigs, satellite communications will continue to play a crucial role in enabling efficient and effective operations in the most remote locations.

## Downstream Retail Solutions

Elevate your downstream retail service stations with unmatched connectivity

Redefine resilience and efficiency in the downstream oil sector with Paratus VSAT solutions. Built on fully redundant teleport infrastructure, our services are tailored to bring you unparalleled connectivity.

As one of Africa's largest satellite connectivity providers, we design custom telecom solutions to suit diverse industry needs.

### Core benefits

- Speed you can count on: experience high-bandwidth internet for data-heavy operations.
- Always online: whether it's load shedding, bad weather or a terrestrial network failure, our connectivity stands firm.
- Ironclad security: a dedicated, secure connection to protect your sensitive business data.
- Effortless network management: maintain seamless connectivity with our simple network interface.
- Round-the-clock support: our 24/7 customer service and expert installation teams make activation simple and efficient.
